

Kano Computer Kit Complete Keyboard Key Replacement

How to replace a key on the Kano Computer Kit's orange keyboard.

Written By: Julia Sherrill

INTRODUCTION

Use this guide to replace a key or or multiple keys in your Kano Computer Kit Complete keyboard. The keyboard is a piece of hardware that allows you to type and enter commands to your computer. A key may need to be replaced when a key breaks or if a key is no longer working properly. In some cases, your keyboard key may not work when pressed. This guide only requires a 1mm flat head screwdriver. Be careful when removing keys as some could be a choking hazard. Any further questions can be answered by going to Kano's Help site.

TOOLS:

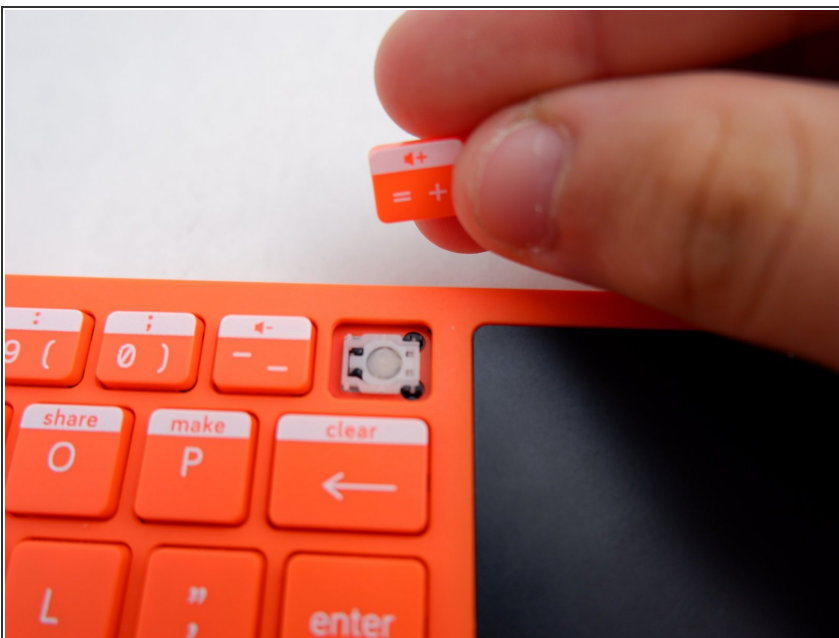

- [1.0 mm Flathead Screwdriver](#) (1)

Step 1 — Keyboard Key

- Use your 1mm flathead to pop the key off. Make sure the flathead is all the way under the key so you can get good leverage.
- ⓘ Don't be afraid to use some force.

Step 2

- Clean out any dirt that is under the key.

To reassemble your device, press the key back into place.
