## INTRODUCTION

This guide will show the user how to repair the speakers on a pair of Beats Solo3 headphones, model number A1796. Most repairs require little more than a pry tool and a Phillips head screwdriver. Symptoms which can result in a speaker replacement can be found on our [troubleshooting page](#).

### TOOLS:

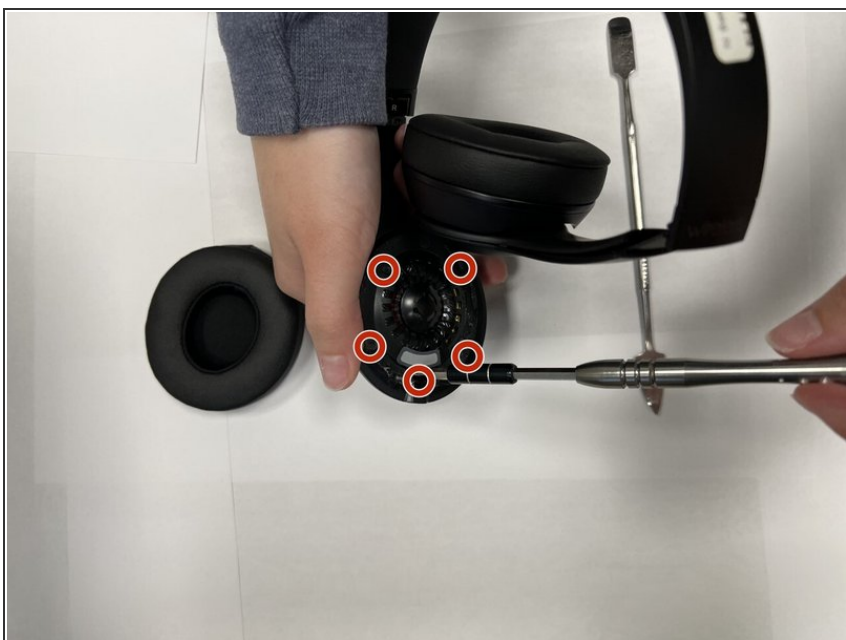

- [Phillips #00 Screwdriver](#) (1)
  - [Soldering Workstation](#) (1)
-

## Step 1 — Speaker

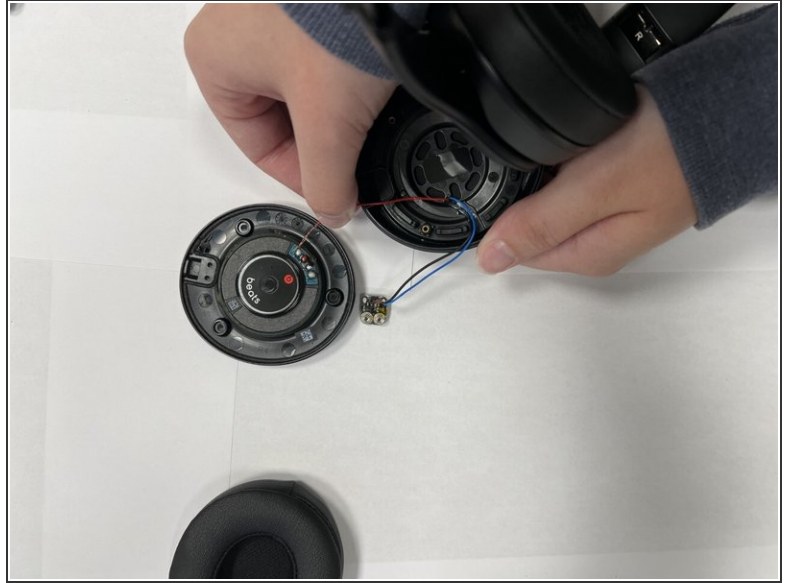

- Use a nylon or metal spudger to carefully remove the ear pad from the ear cup.
- ⓘ Take care to not rip the ear pad fabric with your tools.

## Step 2

- Use a Phillips #00 screwdriver to remove the five screws that hold the speaker in place.

### Step 3

- De-solder wires connecting the circuit panel to the rest of the device.

### Step 4

- Solder wires onto the new circuit panel.

To reassemble your device, follow these instructions in reverse order.
