

How to apply scratch-proof coating

How to make your iPhone screen scratch proof using Liquid Sapphire.

Written By: Irish Jack

INTRODUCTION

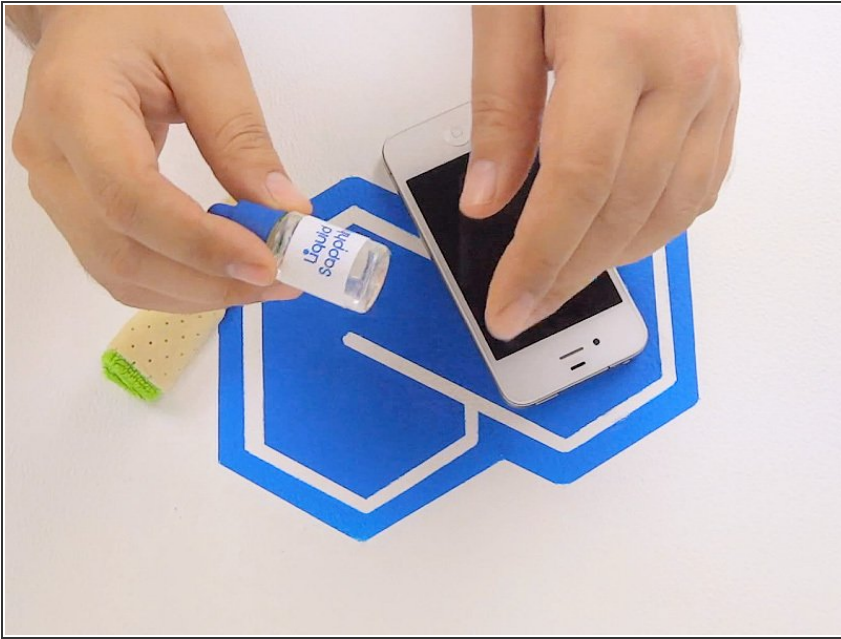

Here you can see how to make any smartphone LCD or any touch screen device scratch proof / scratch resistant using Liquid Sapphire.

TOOLS:

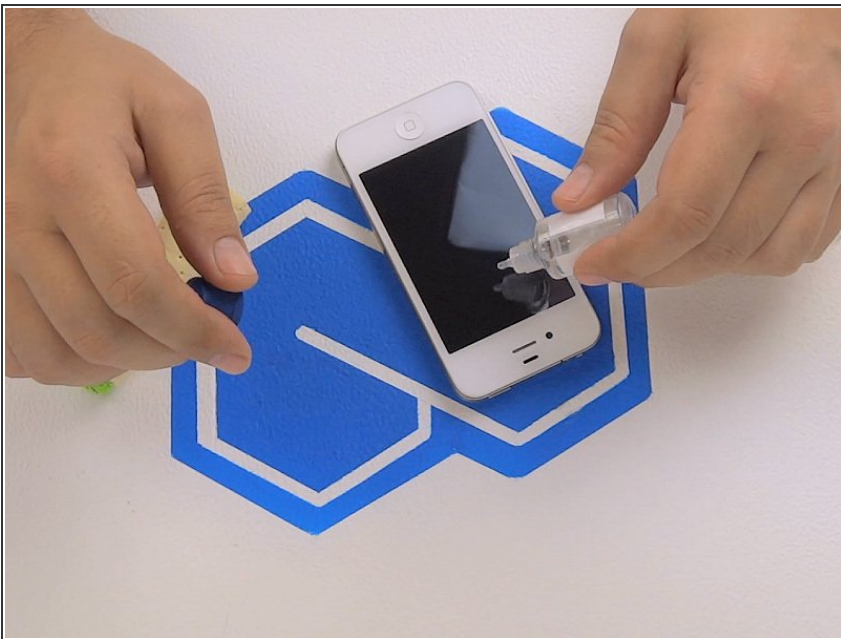

- [Liquid Sapphire](#) (1)
-

Step 1 — How to apply scratch-proof coating

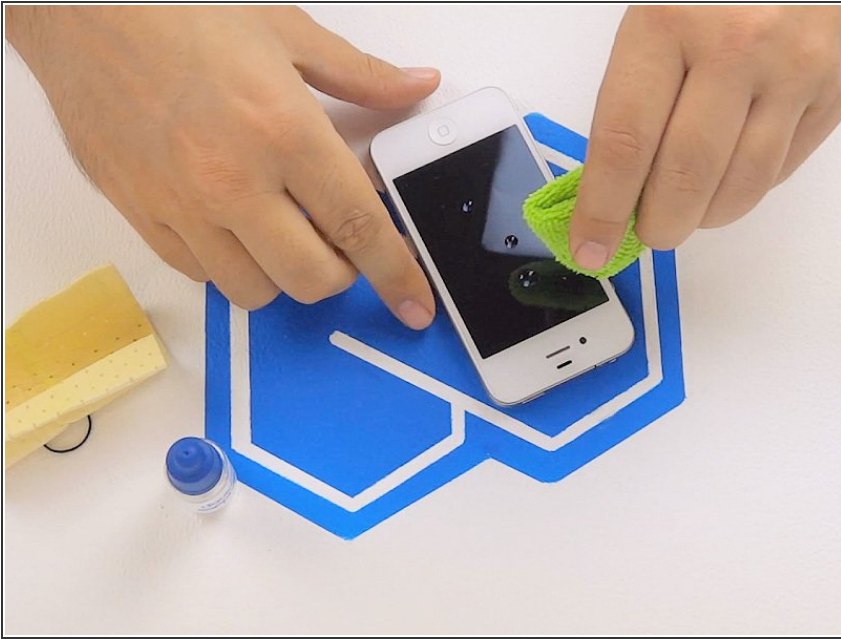

- Use Liquid Sapphire scratch proof nanotechnology coating

Step 2

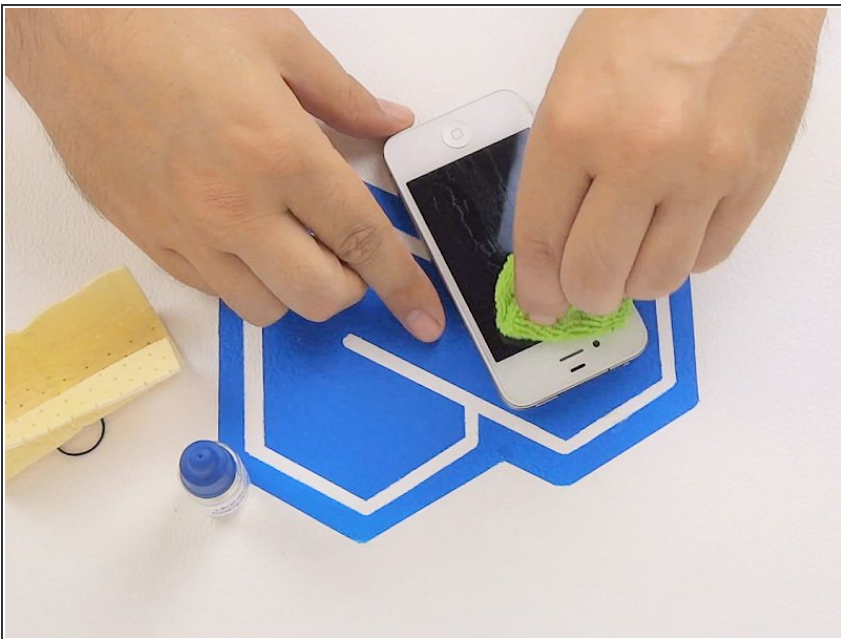

- Add 3 drops of Liquid Sapphire to the LCD

Step 3

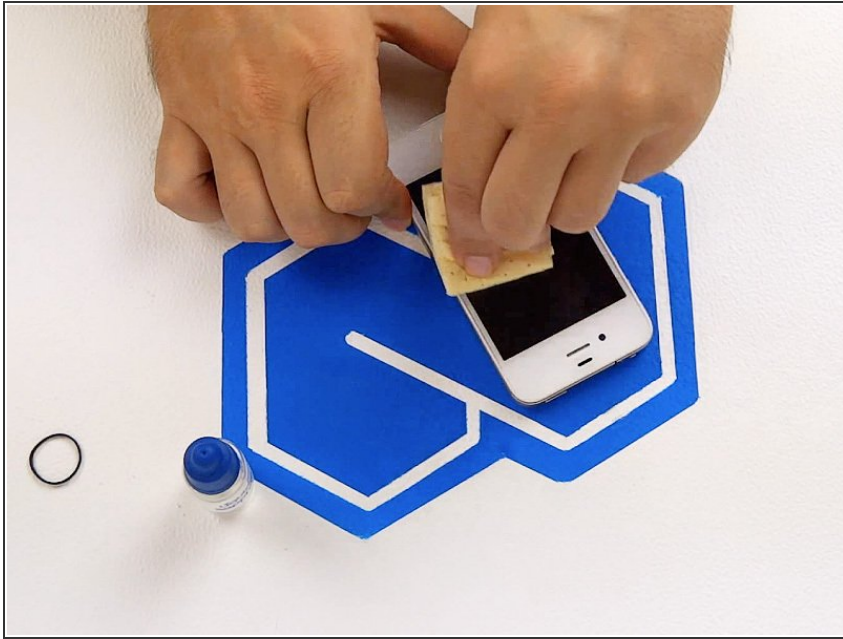

- With a microfibre cloth wipe up and down until the LCD surface is covered.

Step 4

- keep wiping up and down until a Grey/White coat starts forming, it will look similar to a widow smear.

Step 5

- Leave to dry for 10 minutes and then buff off with a shammy (Chamois). Repeat the steps 3 times in total. The device can be used immediately. Keep clear of any objects that might scratch your screen until fully cured, in 24hrs.

Step 6

- Here is a coin scratching an iPhone 5 LCD, watch and see what happens.

To reassemble your device, follow these instructions in reverse order.
