

iMac Intel 21.5" Retina 4K Display Display Assembly Cables Replacement

Prerequisite for removing display assembly in a 21.5" Retina 4K Late 2015 iMac EMC 2833.

Written By: Evan Noronha

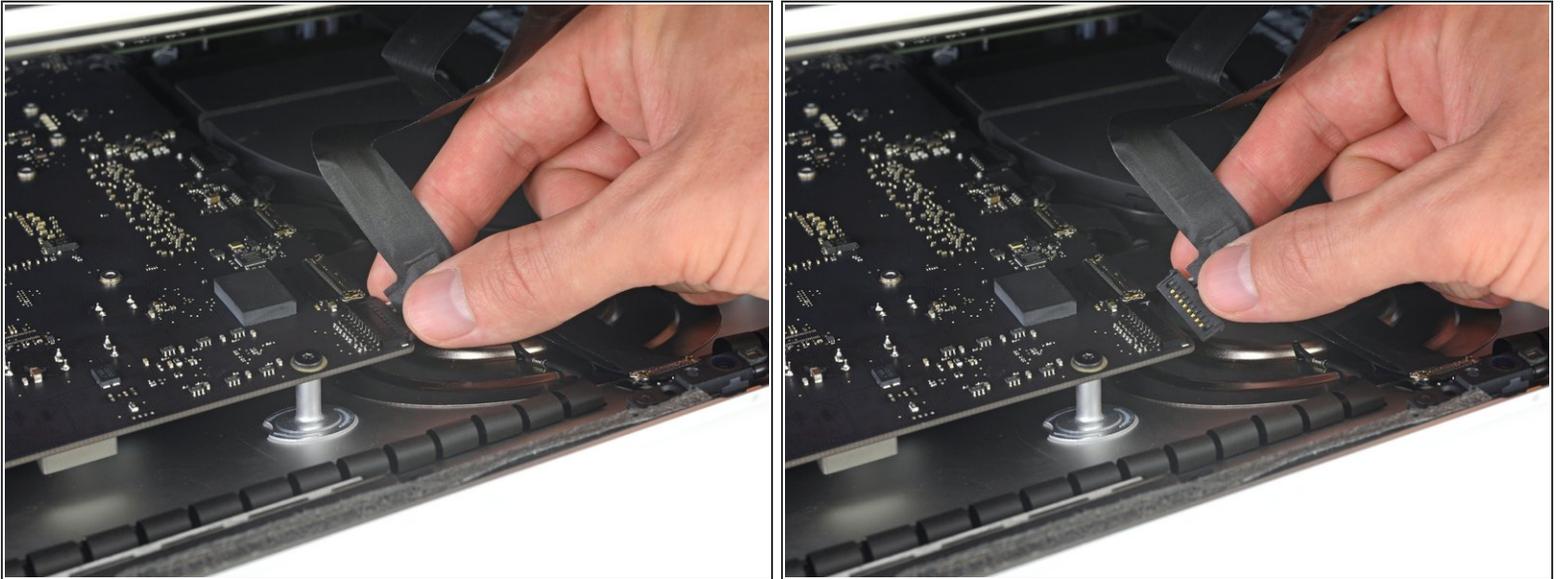

INTRODUCTION

Prerequisite only guide for disconnecting display cables on a 21.5" Retina 4K Late 2015 iMac.

TOOLS:

- [Tweezers](#) (1)
-

Step 1 — Display Assembly Cables

- ⓘ Lift the display up enough to have easy access to the connector, but not so much that you stretch the cables and stress their connections (about 8").
- Hold the display with one hand while using your other hand to unplug the display power cable.

Step 2

- Continuing to support the display with one hand, flip up the metal retaining bracket on the display data cable.
- Carefully pull the display data cable from its socket on the logic board.
- ⚠ Be sure to pull the display data cable connector straight out of its socket, keeping it parallel to the motherboard, to avoid damaging it.

To reassemble your device, follow these instructions in reverse order.
